DiSTI To Deliver HIMARS Classroom to Wyoming Army National Guard

The DiSTI Corporation in conjunction with PEO STRI will deliver Virtual Maintenance Training classroom for the HIMARS/MLRS to the Wyoming Army National Guard.

Orlando, FL (October 21, 2024) – The DiSTI Corporation, a global leader in virtual training solutions, is proud to announce the successful delivery of a six-student virtual maintenance training classroom to the Wyoming Army National Guard. This state-of-the-art classroom will enable the first National Guard unit in the country to train virtually on the High Mobility Artillery Rocket System (HIMARS), and Multiple Launch Rocket System (MLRS) Diagnostic Troubleshooting Trainer (DTT), providing a significant step forward in military training efficiency and effectiveness.

The virtual maintenance training solution from DiSTI offers unparalleled advantages for military training, particularly for complex systems like the HIMARS and MLRS. This method of virtual training has already been successfully implemented in the U.S. Army's Family of Maintenance Trainer's program, demonstrating its effectiveness and value to the military. Through this advanced training environment, warfighters can benefit from enhanced knowledge transfer, improved theory of operations understanding, and increased student throughput.

DiSTI's Virtual Training Solutions stand out with their unique advantages:

- **Increased Student Throughput:** The virtual training enables multiple students to train simultaneously, allowing the Wyoming Army National Guard to maximize training efficiency and maintain operational readiness. This approach is particularly valuable in scenarios where equipment availability is limited, enabling continuous training without dependence on physical assets.
- **Enhanced Knowledge Transfer:** DiSTI's virtual training environment provides an immersive, hands-on experience that enhances knowledge retention and skill acquisition. Trainees engage with accurate digital replicas of equipment, helping them develop familiarity with maintenance procedures in a risk-free setting.

- **Comprehensive Theory of Operations:** The virtual training solution ensures that soldiers not only understand the mechanics but also the underlying principles of the equipment they will be operating and maintaining. This comprehensive understanding instills a deep sense of confidence and security, contributing to higher proficiency when performing real-world tasks.

"We are incredibly proud to support the Wyoming Army National Guard with our cutting-edge virtual maintenance training solution," said John Hayward, CEO of The DiSTI Corporation. "This technology provides a comprehensive, interactive training experience that equips warfighters with the knowledge and skills they need to excel. It's not just about simulating tasks; it's about ensuring that our servicemen and women are mission-ready, and we're honored to be part of that mission."

Why This Is Important for the Army National Guard

As the first National Guard unit in the United States to implement this advanced virtual training solution, the Wyoming Army National Guard sets a precedent for modernization and operational excellence. Given the complexity and critical importance of maintaining systems like the HIMARS and MLRS, having access to virtual training ensures that warfighters are consistently prepared to execute their missions effectively. This initiative demonstrates a commitment to leveraging technology to meet modern military operations' evolving demands, enhancing readiness and safety.

The DiSTI Corporation's award-winning technology exemplifies the future of military training by combining realism, scalability, and cost-effectiveness. By providing the Wyoming Army National Guard with this state-of-the-art virtual maintenance training classroom, DiSTI underscores its unwavering commitment to delivering innovative solutions that empower military personnel to achieve mission success, all while being cost-effective and efficient.

DiSTI solutions are tailored to meet the evolving needs of defense organizations worldwide. For those seeking to learn more about DiSTI's virtual training programs, please reach out to sales@disti.com
